Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Curlin protein csgA precursor - Escherichia coli (strain K-12)

N.Alternate names: csgA protein; major curlin protein
C.Species: Bacherichia coli
C.Species: Bacherichia coli
C.Species: Bacherichia coli
C.Species: Bacherichia coli
C.Species: Bacherichia coli
C.Species: Bacherichia coli
C.Species: Bacherichia coli
C.Species: S70788; G64846; S31202; S34560; S34559
R.Hammar, M.; Arnqvist, A.; Blan, Z.; Olsen, A.; Normark, S.
M.I. Microbiol. 18, G6140, 1995
A.Title: Expression of two csg operons is required for production of fibronectin- and C.
A.Reference number: S70783; MUID:96414468; PMID:8817489
A.Reference number: S70783; MUID:96414468; PMID:8817489
A.Status: nucleic acid sequence not shown; translation not shown

Mypothetical protein At2g15770 [imported] - Arabidopsis thaliana C'Species: Arabidopsis thaliana (mouse-ear cress)
C'Species: Arabidopsis thaliana (mouse-ear cress)
C'Accession: B84533
R'idin, X.; Kaul, S.; Rounsley, S.D.; Shea, T.P.; Benito, M.I.; Town, C.D.; Fujii, C.Y.; M.; Koo, H.; Moffet, K.S.; Cronin, L.A.; Shen, M.; Vanaken, S.E.; Umayam, L.; Tallon, L. Nature 402, 761-768, 1999
Ayītile: Sequence and analysis of chromosome 2 of the plant Arabidopsis thaliana. A;Reference number: A84420; MUID:20083487; PMID:10617197
A;Accession: B84533
A;Accession: B84534
A;Accession: Preliminary
A;Accession: Speciminary
A;Accession: Speciminary

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Sigma S-dependent growth-phase induction of the csgBA promoter in
Scherichia coli can be achieved in vivo by sigma 70 in the absence
of the nucleoid-associated protein H-NS.";
Mol. Microbiol. 13:1021-1032 (1994).
-!- FUNCTION: CURLIN IS THE STRUCTUBAL SUBUNIT OF THE CURLI. CURLI AR.
COILED SURFACE STRUCTURES THAT ASSEMBLE PREFERENTIALLY AT GROWTH
TEMPRERAVURES BELOW 37 DEGREES CELSIUS. CURLI CAN BIND TO
FIBRONECTIN. THE MINOR SUBUNIT IS THE NUCLEATION COMPONENT OF
CURLIN MONOMERS.

Thuman telacemene yoly (AULF-KIDOSE) polymerases tankyrase I and 2

AL Monagi telomeres.";

Mol. Cell. Biol. 22:33-342 (2002).

-!- FUNCTION: May regulate vesicle trafficking and modulate the subjectifular distribution of SLC2A4/GLUT4-vesicles. Has PARP activity and can modify TRT, and thereby contribute to the regulation of telomere length.

-!- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-ribosyl} (N) -acceptor = nicctinamide + {ADP-ribosyl} (N+1) -acceptor.

-!- SUBUNIT: Oligomerizes and associates with TNKS2. Interacts with the cytoplasmic domain of LAPBP/Otase in SLC2A4/GLUT4-vesicles.

-!- SUBUNIT: Oligomerizes and associated with the Golgi and with juxtanuclear SLC2A4/GLUT4-vesicles.

-!- SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi and with juxtanuclear SLC2A4/GLUT4-vesicles. A minor proportion is also found at nuclear pore complexes and around the pericentriolar matrix of mitotic centromeres. During interphase, a small fraction of TNKS is found in the nucleus, associated with TRF1.

-!- ALTERNATIVE PRODUCTS.

Note=No experimental confirmation available;
TISOE SPECIFICITY: Ubiquitous; highest levels in testis.
PTM: Upon insulin-stimulation, phosphorylated on serine residues by MAPK kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   R Genew, HGNC:11941; TNKS.

"DNA sequence of genes 38 encoding a receptor-recognizing protein of
"DNA sequence of genes 38 encoding a receptor-recognizing protein of
Dacteriophages T2, K3 and of K3 host range mutants.";
J. Mol. Biol. 194:31-39(1987).
-!- FUNCTION: Vg38 is at the tip of the long tail fibers and serves as
the phage recognition site for the cellular receptor.
-!- MISCELLANBOUS: THIS PHAGE USE OUTER MEMBRANE PROTEINS OMPF AND TTR
AS RECEPTORS.

synthesized and secreted as zymogens without a signal peptide.";
J. Bicl. Chem. 264:9083-9089(1989).
-!- COFACTOR: Binds 1 zinc ion and 7 calcium ions per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- DOWAIN: THE GLY-RICH REPEATS MAY BE IMPORTANT IN THE EXTRACELLULAR SECRETRON OF THIS METALLOROTEASE.
-!- SIMILARITY: Belongs to peptidase family M10B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CALCIUM 1 AND 2 (BY SIMILARITY).
